

# No Flush BioMate<sup>™</sup>

No Flush Solutions is pleased to announce a new and exciting product for 2010, the **No Flush BioMate<sup>™</sup>**.

The No Flush BioMate<sup>™</sup> works in conjunction with the No Flush BioSleeve<sup>™</sup> to ensure that your **trough urinal** is being maintained correctly.

The No Flush BioMate<sup>™</sup> is intended to be used as an assistant to the No Flush BioSleeve<sup>™</sup> to ensure that enough biological material is delivered to the urinal.

The No Flush BioMate<sup>™</sup> is ideally placed at the opposite end of the urinal to your No Flush BioSleeve<sup>™</sup> (if your No Flush BioSleeve<sup>™</sup> is in the centre of the urinal, a No Flush BioMate<sup>™</sup> should be placed at each end of the trough).

This will ensure that when your water management system activates there is plenty of friendly bacteria released from the gel composite blocks to ensure that uric salts are removed and odour control is optimised.
